# Overview

This asset allows you to add a dynamical day and night change into your project. It also contains stars and various set of properties so you can configure a whole system as you like.

## Quick Setup

- Drag and drop Character prefab to your scene
- Drag and drop DayCycleManager too
- Select DayCycleManager and check if all options are set

- Change options as you like. You'll see all changes on your scene immediately
- Start the game and enjoy!
